PHPで開発が捲るリアルタイムエラーチェック

PHP Emacs Vim PHPStan

# | Who am I...?

aka @tadsan

- Kenta Usami (うさみけんた, [@zonuexe](#))
- Language hobbyist, I love Lisp.
- Web programmer [@pixiv](#)
- Founder of Emacs-PHP
  - <https://github.com/emacs-php>

# | My favorite text editors

---

Maruo Editor (秀丸)

Mery

micro

TATEditor

# I usually use Emacs

---

- That's because it's a Lisp machine that is easy for me to hack.
- There are reasons for each person to choose an editor.
- I am a professional programmer so I would like to raise development efficiency.

First of all....

We hate  
“Religious War”  
宗教戦争

# Code of Conduct

**VIMCONF**

*An International Vim Conference*

## Code of Conduct

[日本語版はこちら / Japanese Version](#)

VimConf is an international conference series of community events for knowledge-sharing, communication, and collaboration, focusing mainly on technology. (TODO: rewrite a paragraph)

Our prime goal is to provide events where all of the attendees can enjoy, and feel welcome to attend. To this end, we expect all who participate in our events to be courteous and be civil towards one another.

We ask that all participants including, but not limited to, the organizers and

Windows  
vs  
UNIX

Tab  
vs  
Space

Statically typed

VS

Dynamic typing

...and

Emacs  
vs  
vi

No

It was a joke?  
It violates professionalism.

お k ?

Even outside  
the conference.  
Is that okay?

リスペクト

Text editor and Plugin  
developers and power users  
respect each other and  
incorporate the trends of  
other text editors.

# Rainbow Brackets

[IDEs](#)[Team Tools](#)[Dev Guide](#)

## Rainbow Brackets

Compatible with: IntelliJ IDEA, PhpStorm, WebStorm, PyCharm, RubyMine, AppCode, CLion, GoLand, DataGrip, Rider, MPS, Android Studio

🕒 Nov 20, 2018

⬇️ 367 240

### Rainbow Brackets / Rainbow Parentheses for IntelliJ based IDEs

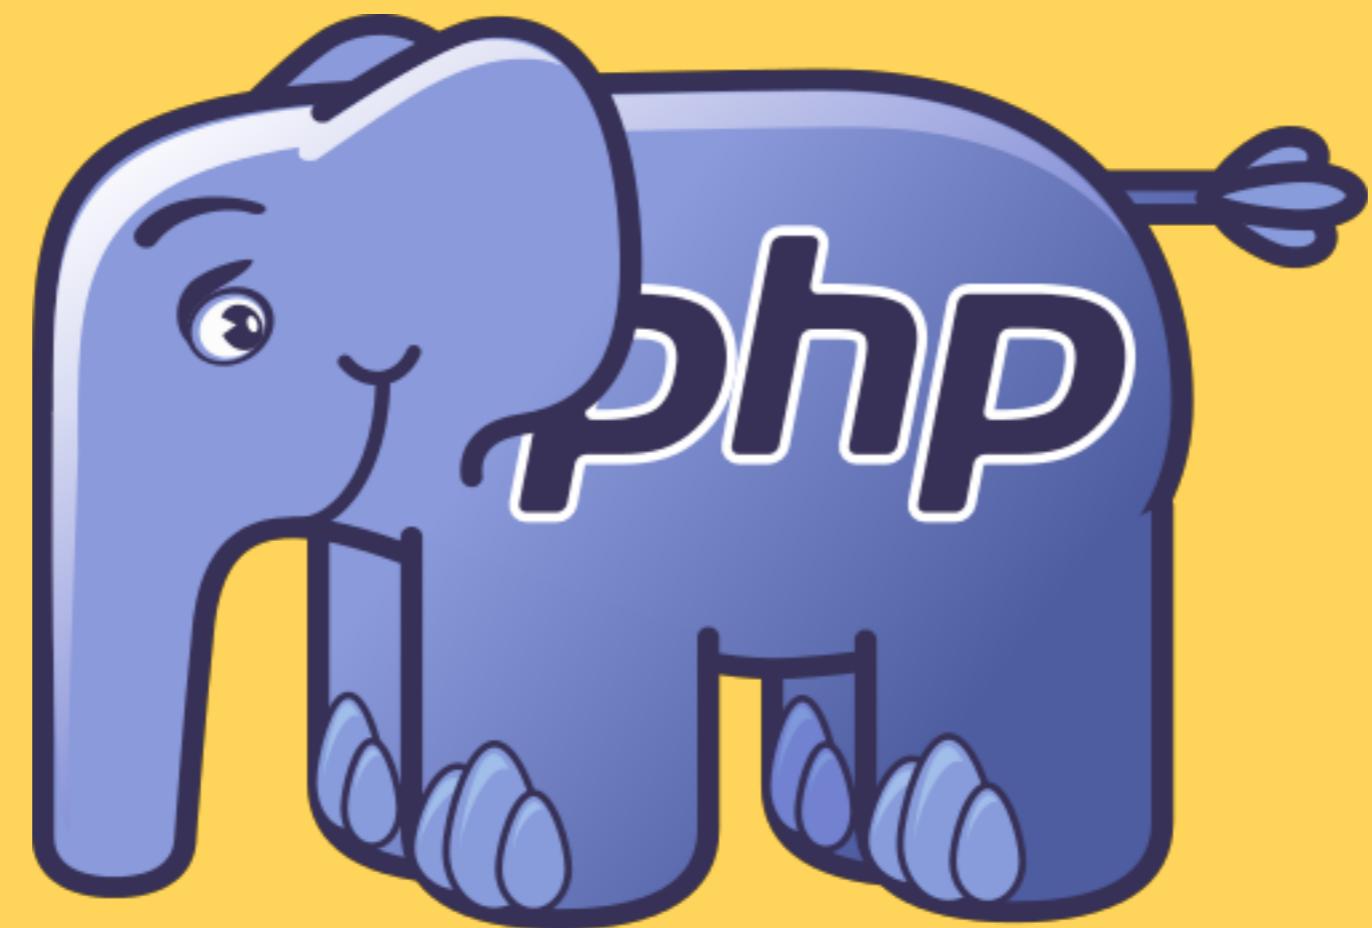

Supported languages:

Java, Scala, Clojure, Kotlin, Python, Haskell, Agda, Rust, JavaScript, TypeScript, Erlang, Go, Groovy, Ruby, Elixir, ObjectiveC, PHP, HTML, XML, SQL, Apex language, C# ...

```
package com.github.izhangzhihao.rainbow.brackets;

public class Test {
    {
        (((((((((((((((((((((((( )))))))))))))))))))))
```

ElePHPant

<?php

# | What's PHP?

---

- It is a kind of Web platform.
- Small sites, many CMS, large scale SNS are built with PHP.
- It is also a general purpose programming language.

# | PHP as a Language 手続き?

---

- PHP is procedural and it has object-oriented feature.
- Weak typing and dynamic type-checking.
- PHP is relatively suitable for static analysis in dynamic langs.

知らんけど

“We have *things like protected properties.*  
We have *abstract methods.* We have all  
*this stuff that your computer science*  
*teacher told you you should be using.*”  
I don't care about this crap at all.” ,

—Rasmus Lerdorf

[https://en.wikiquote.org/wiki/Rasmus\\_Lerdorf](https://en.wikiquote.org/wiki/Rasmus_Lerdorf)

なんでもできる

Abstract class, Trait, Interface,  
Generator, Iterator, Closure, Dynamic  
function call, Anonymous class, eval,  
Type declaration, Associative array  
(Hash table), Reflection API, Self-  
documentation, Standard I/O, REPL,  
Lazy class loading, etc...

# | PHP coding styles

ばらばら

- PHP can be run on cheap hosting servers.
- PHP as a HTML template,  
PHP as a CGI script,  
PHP as a OOP language...
- Various people share PHP.

# | PHP needs IDE?

くあwせdrftgy

- In the early days of my career, there was no one around me developing with IDE.
- However, the scale of our code was huge and it was obvious that tool assistance is necessary.

# | PHP with text editor

- The usual way to code PHP with a text editor is tag jump.
- But project has multiple methods with the same name in OOP.
- There is no smart input completion.

むりぽ

# | Refactoring...?

---

- The important thing is sed and a visual check.
- Must allow the possibility of a run-time error due to refactoring.

Photoshop

PhpStorm

つよい

# | JetBrains IDE

---

- PhpStorm is an IDE derived from IntelliJ IDEA (Java IDE).
- JetBrains' IDE is good at static analysis and refactoring.
- The PHP static analysis features of PhpStorm is practical.

解析できるぞ

# | Static Analysis

---

- Static analysis is required for error detection of code path not executed in test.
- PhpStorm can check mistakes with high accuracy if conditions for specifying types are available.

ミスがわかる

# Coding on PhpStorm

```
10  
11     foreach (x() as $dt) {  
12         $dd->~  
13     }  
14 }
```

Undefined variable \$dd more... (⌘F1)

```
14  
15     $str = 'string';  
16     echo count($str);  
17 }
```

Expected array|Countable, got string more... (⌘F1)

# | Coding on PhpStorm スマート

Typed

```
foreach (x() as $dt) {  
    $dt->_  
}  
m diff(datetime2 : \DateTimeInterface, [absolute : b... DateInterval  
m format(format : string) string  
m getOffset() int  
m getTimestamp() int  
m getTimezone() DateTimeZone  
Press ^Space again to see more variants >> π
```

# | Coding on PhpStorm わかりやすい

Popup  
signature

```
1      $dt->diff()
```

```
2      $dt->diff()
```

```
}
```

Awesome!  
PhpStorm

But, do we have to  
purchase PhpStorm  
to write PHP?

No, No.

Since we are developers,  
we can create FREE  
implementations other  
than PhpStorm.

クオリティ助  
手

# PHP QA Projects

Several PHP static  
analyzer projects  
are active

Phan  
PHPStan  
Phactor

鬼強い

- <https://github.com/phan/phan>
- Static analyzer
- Slow, but it inspects the entire project precisely
- It's included LSP Server

# | PHPStan

---

鬼速い

- <https://github.com/phpstan/phpstan>
- Dynamic and Static hybrid
- Very fast and accurate
- Specific RPC and LSP

互換性

# | PSR-5 (PHPDoc)

---

- PHP Standard Recommendation(Draft)
- PHPDoc is the de facto standard for writing type definitions in DocComment.
- They are working on the standard specification of that tag and type definition

鬼速い

# | Phactor

---

- <http://phactor.github.io/phactor/>
- Phactor provide code jump, completion, refactoring
- This is under development and is now inferior to PhpStorm, but it is promising in the future.

各位仲良く

# Editor-independent Movements

- Language Server Protocol

<https://microsoft.github.io/language-server-protocol/>

- A Language Server is meant to provide the language-specific smarts and communicate with development tools over a protocol that enables inter-process communication.

# | EditorConfig

---

- <https://editorconfig.org/>
- Indent and Newline code can be set for each file name and extension.

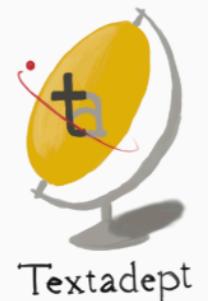

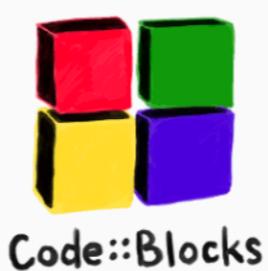

# EditorConfig

```
# Unix-style newlines with a newline ending every file
[*]
end_of_line = lf
insert_final_newline = true

# Set default charset
[*.js,py]
charset = utf-8

# 4 space indentation
[*.py]
indent_style = space
indent_size = 4

# Tab indentation (no size specified)
[Makefile]
indent_style = tab
```

編集中にわかる

# | ALE

---

- Asynchronous Lint Engine  
<https://github.com/w0rp/ale>
- ALE supports PHP syntax checker,  
PHPStan, Phan, Psalm, PHP CS,  
PHP-CS-Fixer and LSP

# Coding on Vim+ALE

ミスがわかる

```
-- if (php_sapi_name() === 'cli') {
    try {
        $this->addPlugin('Bake');
    } catch (MissingPluginException $e) {
        // Do not halt if the plugin
    }
}

src/Application.php
Function php_sapi_name not found.
```

```
$a = 1;
$b = [];

-- echo $a + $b;

if (PHP_SAPI === 'cli') {
    try {
        $this->addPlugin('Bake');
    } catch (MissingPluginException $e) {
}

src/Application.php
Binary operation "+" between 1 and array() results in an error.
```

# Coding on Vim+ALE

```
>> * @return \Cake\Http\MiddlewareQueue The updated middleware queue.  
 */  
public function middleware($middlewareQueue)  
{  
    return 1;  
    $middlewareQueue  
        // Catch any exceptions in the lower layers,  
        // and make an error page/response  
        ->add(ErrorHandlerMiddleware::class)  
  
src/Application.php  
Method App\Application::middleware() should return Cake\Http\MiddlewareQueue but returns int.
```

リファクタ

# | Phactor

---

- Phactor Vim Plugin Provides
  - Context menu
  - Code Navigation
  - Completion (It supports Vim's Omni-completion, Deoplete, NeoVim's NCM and NCM 2)

なにそれ

# Veonim

やばい

# | Veonim

---

- veonim is a simple modal IDE built on neovim.  
<https://github.com/veonim/veonim>
- That is integrated with LSP and has a graphical interface like IDE.
- Veonim realized almost all the functions I wanted as ideal Vim.

# | Veonim

---

やばい

- I learned Veonim by @ShougoMatsu two weeks ago.
- He said that I do not use yet because my plugins does not work.
- I have not finished studying Veonim yet, but this may be a wonderful IDE
